

Leave Them Wondering How You Did It

Tools for faster Lotus Notes development and
better Domino administration

People *like* using Ytria tools...and they're not afraid to tell the world

Most of today's Ytria users learned about the tools from existing customers who just couldn't keep a secret

scanEZ is, in my eyes, the most useful tool in existence for day-to-day work as a Notes developer. The software is a tremendous productivity booster and the support is very responsive and competent. I love this tool! ””

—Sven Pelta, Leica Microsystems

Some folks just have high standards when it comes to the tools they use

“**When you call an electrician, you hope that he shows up at your home with good tools.** So as a professional consultant who visits a customer when he's in trouble and really needs someone who knows what he's talking about, **it's nice that I can open my Ytria toolbox and say, 'look, here are some tools I can use that will let me work faster** and do things that even your admins can't do.'””

—Thomas Lang, Managing Director of at once GmbH

Mr Lang and two other consultants are handling the Domino needs of one of the largest Notes workflow environments in the world. He doubts that such a small team could have managed such an enormous project without the Ytria tools.

“**Ytria's tools were instrumental in helping us develop our multi-award winning IdeaJam idea and innovation management software. From aclEZ to signEZ - we use all of the tools which simply make the development and delivery of our products easier and faster. We highly recommend that every Notes and Domino developer add Ytria's tools to their toolbox.**””

—Bruce Elgort, Elguji Software, and OpenNTF.org Co-Founder

Mr Elgort started using Ytria tools back when he was an in-house developer. He naturally continued to use these tools as he and his partners built their own successful Notes-based business.

“**Why get tools from a company that listens?** I've worked with lots of software companies where they have a product and that is it—you'll get what you're given and they have very little desire to follow suggestions from the users. But **in the case of Ytria there's a clear passion** within your organization **for improving these tools constantly.**””

—John Cawrey, IT Director, Practice Plan UK

Mr Cawrey has been using Ytria tools since 2006, first as a solo developer and now as an in-house IT Director. The toolkit has remained vital to his work even as his responsibilities have changed.

Further your career, run a better business, *and* get home in time for dinner

When your Notes shop fires on all cylinders,
you can lap the competition

“With the Ytria tools we’re no longer using our development staff for customer support so we can offer more features for a lower price. **We do it better, easier, in less time with better quality.** So it’s easy to convince a customer to engage in a project because it won’t cost lots of money **thanks to the tools**—previously they may have not given us the work because it would have been too expensive.”

—Guenter Stumpf, Managing Director of SOBIS

Mr Stumpf’s company doubled its end-user population over five years but didn’t need to add application support staffers; he credits Ytria tools for helping achieve this feat.

It doesn’t hurt to have a reputation for
getting things done fast

Mr Day credits the productivity gains that come from using Ytria tools with helping his consultancy take on more clients.

“For me speed is very important—the **quicker I fully solve a given customer’s problem the more time I have for other things.** So I’ll be paid the same if I’m on site for one hour or seven hours. If I can be done in an hour, I’ve got six extra hours to be doing other things and earning more money.”

—Paul Day, Osprey Consultancy

Fortune favors the prepared, so choose your tools wisely

“The first thing I told my bosses the day I got started at my job was ‘**we need these tools, they’ll pay for themselves in no time.**’ Once you’ve seen scanEZ in action a few times and heard end-users say ‘wow, that was quick’ and word gets around how happy they are to see things completed in three hours rather than three weeks, it gets to be an easy story to sell to your boss.

And having the Ytria tools furthered my career. I came from being just another Notes developer to being the **King of Lotus** [at my company].

—Fabrice Langlois, IT Systems Architect at Teradyne

Mr Langlois began using Ytria tools in 2006; he credits the tools with helping him earn a job promotion.

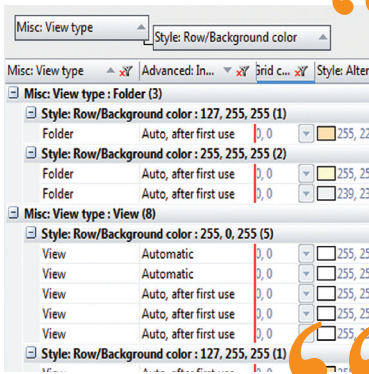

Tools for faster Lotus Notes development

With the right tools, unfeasible projects magically morph into simple tasks

“If you want to redo UI bits like action bars or view color and font settings, the **Ytria actionBarEZ and viewEZ** tools **are essential**—just another example of an overwhelmingly tedious task that would be almost pointless [without these tools] because of the time required.”

—Kevin Pettitt, Lotus Notes Application Developer/Architect, Technology Evangelist and blogger at lotusguru.com

Flexible interface: Ytria tools (viewEZ is shown here) feature a powerful and customizable grid interface that supports grouping, filtering, data exportation and column freezing.

“Work which would have taken us one week can now be done in one half-day using viewEZ and actionBarEZ.

The rapidity with which we can make massive amounts of changes in the database **makes us more daring**; and we can now afford to try out different combinations before settling on a final design.”

—Andrew Magerman, Magerman Collaborative Software GmbH

Code less, accomplish more

I became a faster developer once I had scanEZ—I didn't have to go hunting around for code snippets and I didn't have to go and reengineer things.”

—John Cawrey, IT Director, Practice Plan UK

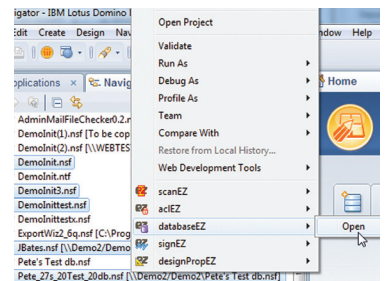

Try them once and there's no going back

“Once you get addicted to them—you can't work without Ytria tools!”

—Jakob Majkilde, Lotus Notes developer since 1992 and founder of Notesnet.dk

“What mattered to me is the combination of tools all in one place. There are tools and hacks to see or copy replica IDs, to update fields and to resolve conflicts, but they are all separate. **With scanEZ, you have it all under 'one roof.'**”

—Gerald Mengisen, Lotus Notes Development, United Nations

The best of both worlds: Ytria tools are standalone applications so they'll never tie up your Notes, Designer or Admin clients. But they still offer seamless integration with native Domino tools via widgets and toolbars.

Tools for better Domino administration

Seeing more helps you avert catastrophes and run a tighter ship

“ In just one situation, agentEZ saved us dozens of hours of manual effort and helped us prevent any service disruption to our thousands of Notes users. It's a valued tool in our arsenal that I would recommend to anyone wishing to save time and improve service levels. ”
—Norm Van Bergen, Collaborative Applications Architect, Symcor Inc

A screenshot of a software interface for resolving conflicts. It shows a table with columns for ID, Name, Date, and Size. The first row is highlighted in green and shows a conflict between two versions of a document. The second row is highlighted in yellow and shows a document with a specific name and type. There are checkboxes and text boxes for resolving the conflict.

ID	Name	Date	Size
45FF44EBA0EDF4CA85256F8D0063E02	Eric HOUVENAGHEL/YTRIA	01/18/2005 01:10:54 PM	76 bytes
C: C6A94A7B	MyDoc	04/29/2005 01:34:54 PM	76 bytes

When everything is in flux, you need tools designed to handle big changes

“ If you are talking to an administrator and he asks you to change agents from one server to another on 500 databases and you say it'll take about five minutes. **He'll think you're crazy**, you need two days to do this. **But you can show him that this takes no more than five minutes with the Ytria tools.** ”
—Thomas Lang, Managing Director of at once GmbH

Greet conflicts with a smile:
With scanEZ's dedicated Conflict Solver tool, resolving replication/save conflicts is so fast and easy, you might find yourself enjoying the task.

“ With this amazing tool, aclEZ, I just updated 125 databases' ACLs in 2 minutes and 21 seconds; the actual work on my part was done in less than a few seconds but I was connecting to a remote server. I accomplished adding a server group, assigning attributes and multiple roles in a total of 4 mouse clicks!! Whoo hoo!! ”
—Trina Richardson, Lotus Domino Administrator, Fragomen

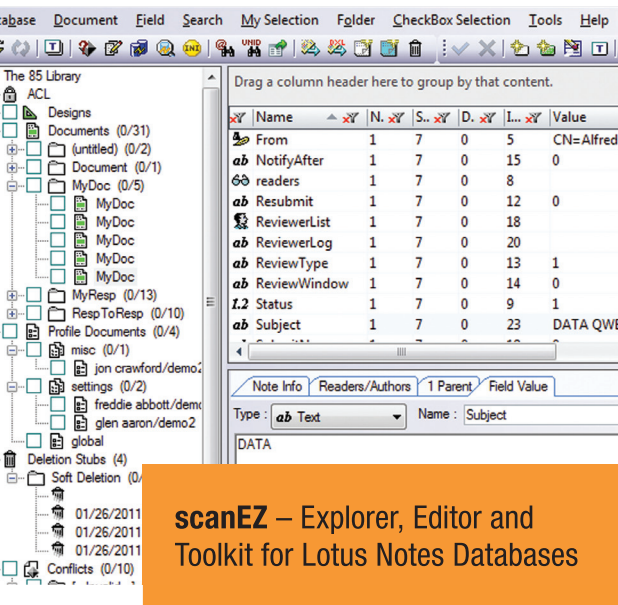

Could the basic admin toolkit be holding you back?

“ At a certain point we decided that I should purchase the Ytria administration suite while my colleague purchased the development suite. And I must say that since then, **I simply cannot understand how you can do proper admin work without these tools. I find them very much indispensable** for a lot of the stuff I do. ”
—Andreas Bisiach, Senior Architect at Symfoni Software

Mr Bisiach recently reconfigured a client's Domino environment after a complicated organizational de-merger had left scores of agent, signature, ACL and document data issues. Ytria signEZ, scanEZ, agentEZ and aclEZ played an integral role in his timely completion of this job.

Ytria's line of tools for Domino administrators and Notes Developers

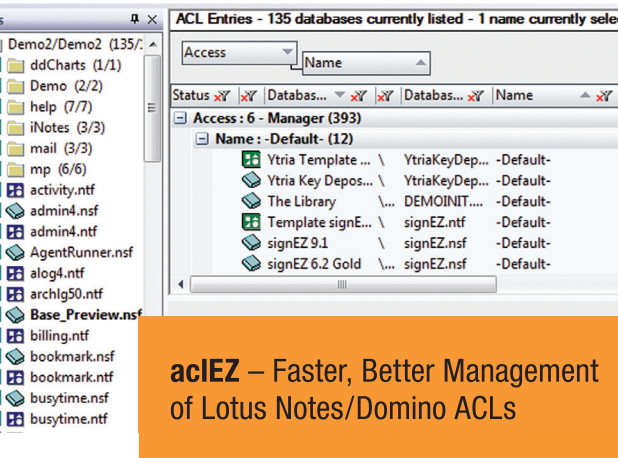

scanEZ – Explorer, Editor and Toolkit for Lotus Notes Databases

You'll be Shocked to See What's Hidden in Your Databases. *scanEZ lets you:*

- See and change anything in an NSF file—even profiles and deletion stubs
- Mass-modify documents without coding agents
- Resolve save/replication conflicts instantly
- Preview or simulate replication
- Speed up development, administration and maintenance jobs with dozens of specialty tools
- And much more...*

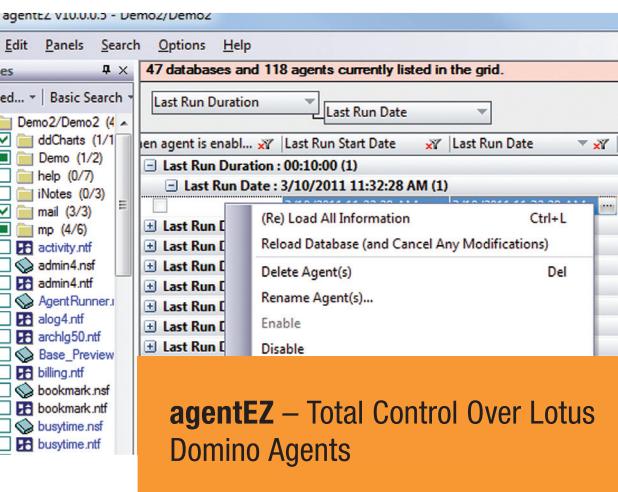

acIEZ – Faster, Better Management of Lotus Notes/Domino ACLs

It's Time-Consuming and Risky to Manage ACLs Manually. *acIEZ lets you:*

- Get a bird's-eye-view of all ACLs on a Domino server and categorize them for easy analysis
- Spot ACL inconsistencies and security holes and fix them in a click
- Manage groups—including nested groups—with ease
- And much more...*

agentEZ – Total Control Over Lotus Domino Agents

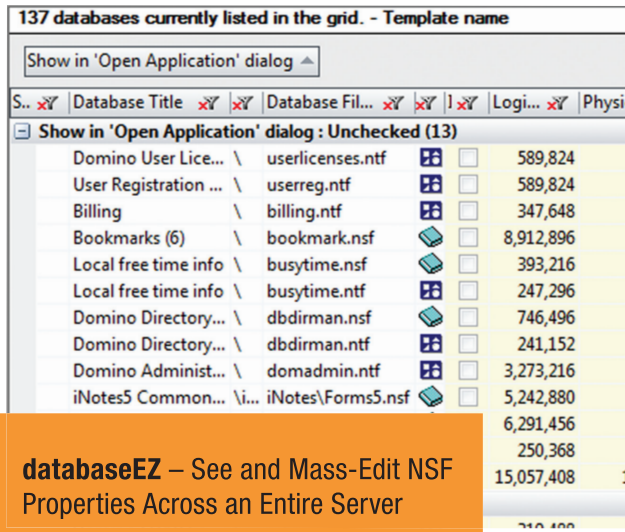

Don't Let Rogue Agents Wreak Havoc on Your Servers. *agentEZ lets you:*

- See all the agents on a Domino server—no matter when they're scheduled to run
- Get instant access to global agent properties plus the ability to mass-edit them
- Spot rogue or poorly scheduled agents with smart analysis tools including a visual agent timeline chart
- And much more...*

Manage Global Database Properties on a Domino Server. *databaseEZ lets you:*

- See server-wide database properties in a spreadsheet-like GUI—even information not listed in Domino Administrator
- Search, group or filter using any database property
- Mass-edit database properties for several NSF files at once
- Get unbeatably comprehensive property information
- And much more...*

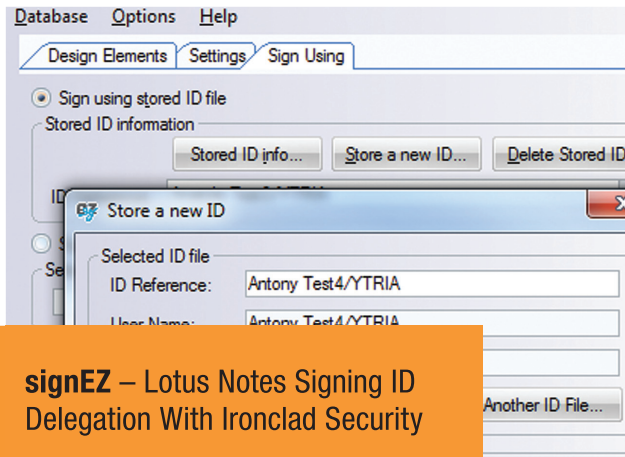

databaseEZ – See and Mass-Edit NSF Properties Across an Entire Server

Lose Development Bottlenecks but Keep Security Ironclad. *signEZ lets you:*

- Delegate access to Notes signing IDs with tight controls plus audit trails
- Sign with different IDs without disrupting your Notes session
- See signature issues and know ‘who signed what’ with powerful auditing tools
- Automate signing/auditing with batch processing and command line support
- And much more...*

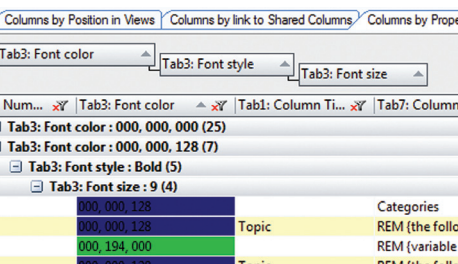

signEZ – Lotus Notes Signing ID Delegation With Ironclad Security

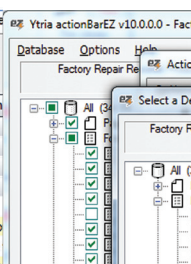

Put an End to Time-Wasting Repetition in View Development. *viewEZ lets you:*

- Mass-edit view properties quickly and easily
- Manage view columns across an entire application in a powerful spreadsheet-like interface
- Work smarter with column formula analysis and search-and-replace tools
- And much more...*

Overhaul Lotus Notes Action Bars at Lightning Speed. *actionBarEZ lets you:*

- Modify several action bars simultaneously—even use an existing design as a template
- See (and edit) all of a database’s actions and their properties in a table
- Manage shared actions across an entire application
- And much more...*

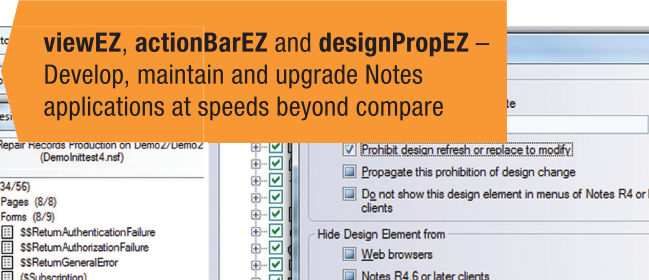

viewEZ, actionBarEZ and designPropEZ – Develop, maintain and upgrade Notes applications at speeds beyond compare

The Right Tool for Design Source Property Jobs. *designPropEZ lets you:*

- Audit or mass-modify design source property flags like “Prohibit Refresh”
- Automate design source property flag configuration with a powerful batch processing database
- And much more...*

“In the past, things that took—let’s say half an hour—can now be solved in five minutes thanks to the Ytria tools.”

—Guenter Stumpf, Managing Director of SOBIS

“Once you have these tools, you’ll wonder how you ever managed without them.”

—Ingo Hefti, Senior developer at Sedna Informatik AG
